

Uncompromised Performance - Unequaled Versatility

The self-powered PowerNet ST and non-powered STX Series loudspeakers unite advanced technology and application-driven engineering to bring live sound closer to the ultimate reference point: reality. Patented CoEntrant M/H transducers, Class D Digital Amplification and unique innovations such as our Complex Conic horns combine to deliver natural sounding music and intelligible speech. Wherever audiences and operators demand superior performance and ease of use, ST/STX loudspeakers are the choice for transparent, reference quality performance.

All ST4LR PowerNet loudspeakers are RHAON empowered for flexible analog and digital signal distribution and loudspeaker management and control over a standard Ethernet network.

Applications

- Virtually any application where additional low frequency energy is needed and outstanding sonic performance is required.
- Multi-channel A/V playback systems, live sound and music systems in clubs and disco's (with associated ST4R and STX4 full-range 3-way loudspeakers).
- Array modules for theatrical and concert sound systems, sound reinforcement systems in houses of worship.

PM-1R PowerNet Digital Amplifier

Passive or self-powered and networked, you can choose the system configuration that meets your needs. Select the STX4L when the project dictates the use of external amplifiers and the self-powered PowerNet ST4LR for convenience and control in other applications.

The PM-1LR, the heart of the PowerNet ST4LR is a new kind of intelligent electronic system. It combines Class D digital amplification with RHAON, the Renkus-Heinz Audio Operations Network for comprehensive DSP controlled signal processing and control.

RHAON EMPOWERED RHAON empowers you with CobraNet digital audio distribution, user configurable DSP for maximum control, remote systems management from any Windows computer, life safety functions and more – all using standard Ethernet hardware and cable.

The PM-1LR has dual analog inputs, dual CobraNet inputs and an AES3 serial input. The onboard DSP is easily configured using RHAON software; it includes eight bands of parametric EQ, high and low shelving filters, delay and input level control. Critical operating parameters such as signal clipping, amplifier output voltage and current, and temperature are continually monitored with automatic alert functions.
